

CATIONIC LIPID COMPOSITIONS TARGETING
ANGIOGENIC ENDOTHELIAL CELLS

5

ABSTRACT OF THE DISCLOSURE

Angiogenic endothelial cells are selectively targeted with lipid/DNA complexes or
cationic liposomes containing a substance which affects the targeted cells by inhibiting or
promoting their growth. A site of angiogenesis can be precisely located by administering
cationic liposomes containing a detectable label. The complexes may comprise nucleotide
constructs which are comprised of promoters which are selectively and exclusively activated in
the environment of an angiogenic endothelial cell.
